ACE Convertor Special Version X

Option "X": Horizontal/Vertical Panning on Letterbox/Pillarbox

Option "X" offers Horizontal Panning when using Letterboxing or Vertical Panning when using Pillarboxing. In both cases the panning is proportional to zoom level. So panning is zero when no zoom is applied and automatically increases in effect with the zoom level so that it is always possible to pan over the whole source image width or height. This allows control over zoom induced cropping for cases where the main focal point of the image is not in the centre.

Fade is always set to the maximum rate (1 second as standard or 0.5 seconds with "Q" Option).

The MANUAL button is the PAN ENABLE and the Speed/Manual Fade control becomes the PAN CONTROL:

STATE	FADE/MANUAL KNOB EFFECT
DIGITISE	NONE - NO Panning
ZOOM	NONE - NO Panning
LETTERBOX	Horizontal Panning - Varies with Zoom Level
PILLARBOX	Vertical Panning - Varies with Zoom Level
